

ADVANCES IN GROUP THEORY AND APPLICATIONS

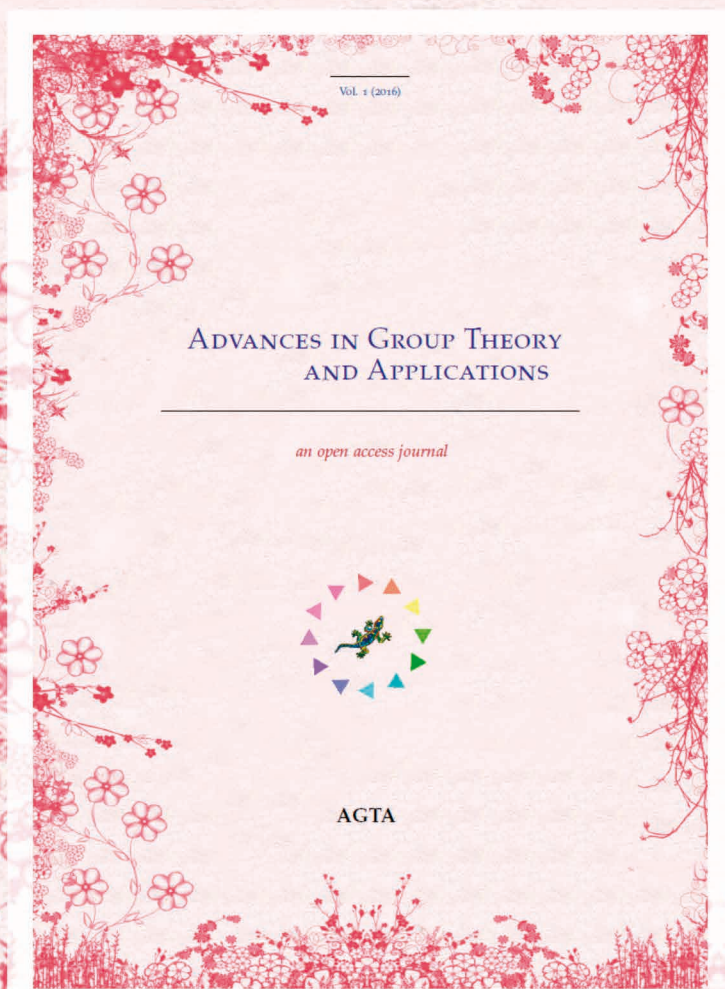

an open access journal

The journal *Advances in Group Theory and Applications* is a publication issued by the non-profit association AGTA, with the aim of publishing high-quality research papers containing significant results in any topic of group theory and its applications. Papers are accepted after a rigorous peer-review process.

Advances in Group Theory and Applications is an open access journal, i. e. all accepted papers are immediately and freely available on the journal web site advgrouptheory.com/journal. There are no publication processing charges, since all costs associated with the publication and production are covered by the association AGTA.

AGTA wishes that the journal could be a reference point for all group theorists, and in particular for the young ones; to this aim the journal also contains a section of open problems.
